## Corrigendum to ‘Lateral M-Mode: Ultrasound Visualization of Displacement Along Longitudinal Direction at Intima–Media Complex’ [Ultrasound in Med &amp; Biol. 49 (2023) 875-888]

Shohei Mori <sup>a,\*</sup>, Mototaka Arakawa <sup>a,b</sup>, Hiroshi Kanai <sup>a,b</sup><sup>a</sup> Graduate School of Engineering, Tohoku University, Sendai, Japan<sup>b</sup> Graduate School of Biomedical Engineering, Tohoku University, Sendai, Japan

The authors regret than an error was present in the legend to figure 5. The correct legend appears below:

Fig. 5. (a) Conventional B-mode image and (b) image of the differentiated envelope between consecutive ultrasound beams at the 0th frame (time of R-wave) for participant A. (c, d) Normalized cross-correlations between the 0th and 1st frames where the correlation kernel was set as a *red parallelogram* on (a) and (b), respectively.

(e) Estimated results of the longitudinal displacement of the intima–media complex (IMC) by the block-matching method, superimposed on the lateral M-mode image. The result using the differentiated envelope in the block-matching method is plotted as a *red line* and the result using the simple envelope is plotted as a *blue line*.

The authors would like to apologise for any inconvenience caused.
